DETAILED ACTION

Response to Arguments

1. Applicant's arguments, see amendment, filed 12/10/2007, with respect to claim 1 have been fully considered and are persuasive. The rejection of claim 1 and all claims dependent therefrom has been withdrawn.

Allowable Subject Matter

2. Claims 1-3,31,32,41-51 are allowed.

3. The primary reason for the allowance of claim 1 is the inclusion of the limitations of "an under-coating solution that does not contain a reactive species", "at least one ink-jet ink colorant comprising a colorant and an aqueous carrier", "warming the printed surface to drive part of the water in the ink into the under-coating and to evaporate the remaining part of the water", and "over-coating the dried surface with a water-based coating". It is these limitations found in each of the claims, as they are claimed in the combination, that has not been found, taught or suggested by the prior art of record which makes these claims allowable over the prior art.

Now turning to Baxter et al. (US 7001016), Baxter discloses a system for printing a simulated wood pattern on a panel which could be constructed of plastic in order to simulate a wood finish using ink jet printing. Baxter discloses an undercoating step of a nonreactive species, namely a thermoplastic formulation, however uses UV curable ink for the image and the topcoat. A UV curable ink is not appropriate for the inks as

claimed because a UV curable ink cannot fulfill "warming the printed surface to drive part of the water in the ink into the under-coating and to evaporate the remaining part of the water" as applicant describes in the background. Therefore, the claimed limitations are not taught, found or suggested by Baxter.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. US 20060125902 A1, US 20050195260 A1, which are both printed publications by the same inventor as the instant application.
